1671.

Apollo Anglicanus,

THE ENGLISH APOLLO:

Assisting

All Persons in the right Understanding of this Years Revolution, as also of things past, present, and to come.

With necessary *Tables* plain and useful.

A twofold Kalendar, *viz. Julian* or *English*, *Gregorian* or *Forein* Computations, more plain and full than any other; with the Sun and Moons Risings, and Settings, dayly observ'd.

Being the Third after Bissextile *or Leap-year.*

With a useful Continuation of

GESTA BRITANNORUM,

From 1665. to this present Year.

By RICHARD SAUNDERS
Student in Astrology and Physick.

Cognosce alia, ut te cognoscas; cognosce teipsum, ut cognoscas Deum.

LONDON, Printed by *A. C.* for the Company of Stationers. 1671.

A Table shewing how many years Purchase a Lease or Annuity, to endure for any Term of years under 33. is worth presently at Interest upon Interest, at six in the hundred: and shewing plainly how to discount any Lease in Being, and the true value of the Reversion after any number of Years.

Years of a Lease.	Years.	Months	dec. par
1	0	11	0
2	1	9	9
3	2	8	1
4	3	7	9
5	4	6	5
6	4	11	0
7	5	7	0
8	6	2	5
9	6	9	6
10	7	4	3
11	7	10	7
12	8	4	6
13	8	10	3
14	9	3	6
15	9	8	5
16	10	1	3

The use and Explanation of this Table.

The first Column towards the left hand, sheweth the years of a Lease or Annuity, and right against each Year, is the Years Months and Decimal parts of a Moneths purchase, that such a Lease or Annuity is worth.

Example.

Suppose a Lease or Annuity to continue ten Yeares, and you would know how many years purchase it is worth in present money, look in the Table for ten years of a Lease to the left hand, and against the same you shall find 7,4,3. which sheweth such a Lease to be worth seven years four months, and three tenth Parts of a Months purchase.

Years of a Lease.	Yeares.	Months	dec. par
17	10	5	8
18	10	9	9
19	11	1	3
20	11	5	7
21	11	9	3
22	12	0	5
23	12	3	6
24	12	6	6
25	12	9	4
26	13	0	0
27	13	2	5
28	13	4	9
29	13	7	1
30	13	9	2
31	13	11	1
32	14	1	0

Again, are you to take or buy the Reversion of any Lease or Annuity, work thus, Suppose the Lease to be thirty years in all; you find in the second Table, and right hand against thirty, 13 years 9. months, and two tenth Parts of a moneths purchase; this it were worth, were it in present possession. But suppose there be a Lease of five years (more or less) before your Commence; look in the Table against the five Years, and there you find four Years, two Moneths, five tenth parts, halfe a Moneths purchase; take this out of the sum against thirty, which is 13,9,2. 4,2,5. The remainder is 9. years six moneths, seven tenth parts of a month; and so much is the Reversion after five years worth, the remainder of thirty years. This is useful and very easie.

A Table of the Kings and Queens of *Engl.* since the Conquest

Kings & Queens n.	*Born Anno.*	*Began to Reign.*	*Reigned Y. M.*	*Since their reigns ended*	*Buried at*
William 1	1023	1066, Oct. 14	20 11	584, Sept. 9	Caen Norm.

Charls 2	1630	1648, Jan. 30	whom God grant long to Reign.		

Now *Peace* and *Plenty* (in our Bowels) reign,
And none but *Enemies* are heard complain;
I ask our *Anti-Monarchists*, How they
Could more oblige us if they had the sway?
For let them fancy what they please, new things,
No Freedom's like to that proceeds from KINGS.

Forewarn'd, forearm'd, the Terms approach you see;
No Muſick's ſweet, like Angels Harmonie.

Hillary-Term begins *Jan.* 23. and ends *Feb.* 12.

Note, The Exchequer opens eight days before any Term begins, except *Trinity* Term, before which it opens onely four dayes.

Note, That the firſt and laſt dayes of every Term, are the firſt and laſt dayes of Appearance.

Directions for the ſubſequent Diary, or Almanack.

1. IN the firſt column to the left hand, on the left hand page, you have the Numeral figures of the days of the Month.

2. In the ſecond column you have the week days, and Dominical Letter.

3. You have all the principal and obſervable Saints days and others; the places of the Planets, and the Moon moſt nights with what fixed Stars ſhe is with, is obſerved; by which the Aſteriſms and Conſtellations are eaſily known to an ingenious eye and underſtanding.

4. The Moons place in the Zodiack every day at noon.

5. The age of the Moon, by which the Tides are known.

6. The riſing and ſetting of the Moon, every day in the year.

7. The general ſtate of the weather, with much care performed by the Author.

8. In the 8. column, the firſt on the right hand, you have the Engliſh account. In the 9. the Forein. In the 10. the Roman week days, and Sunday Letter.

11. The perfect Roman Kalendar and Saints days.

12, 13, 14, the utmoſt to the right hand, you have the dayly riſing and ſetting of the Sun, with the Aſpects.

A Table to find when the Moon will be full South every day this year, whereby the time of Tides is exactly known.

M. D.	H. h.	f. M.
1	16	12	48
2	17	1	36
3	18	2	24
4	19	3	12
5	20	4	0
6	21	5	48
7	22	6	36
8	23	6	24
9	24	7	12
10	25	8	0
11	26	8	48
12	27	9	36
13	28	10	24
14	29	11	12
15	30	12	0

First find her age in the 5. column of the Almanack, which is exactly every day noted; which age ſeek out in one of the two columns of this Table to the left hand, againſt which in the third and fourth columns is the hour and minutes which ſhew the time of the Moons being South.

As for example, the 19. day of *March* the Moon is 19 days old, which being found in the 2 column of this Table againſt 4, to the right hand, it points to 3 h. 12 m. at which time the Moon is South the ſaid 19. day of *March* 1671. *Et ſic de cæteris.*

Here note, that all the increaſe ſhe cometh to the South in the evening following the Sun; but in the decreaſe, in the morning going before the Sun.

By any Sun-dial you may know the hour of night by adding to the time of the Moon being South after, or ſubtracting before.

To find the time of high water in most Coasts of England.

First, as you before were taught, find at what time the Moon will be South, for then you may truly conclude it High-water at *Southampton*, *Quinborough*, and *Portsmouth*, for there the South and North Moons make a High-water. But when you desire the time of Full Sea in any of the following Coasts in the ensuing Table, find the name of the place, and see how many hours and minutes be annexed thereunto in the column under *H. M.* which added to the time of the Moons coming to South, gives you the time of High-water for the place required.

A Tide-Table, with the Names of the Havens.

	H.	M.
Rochester, Maldon, Aberdeen,	0	45
Gravesend, Romney, Rankins,	1	30
London, Tinmouth, Hartlepoole,	3	0
Frith, Leith, Dunbar, Marbon,	4	30
Newcastle, Falmouth, Humber,	5	15
Lin, Antwerp, Plimouth, Hull,	6	0
Briſtol, Lanion, Foulneſſe,	6	45
Milford, Bridgewater, North-coaſt,	7	30
Portland, Peterport, Hartſlew,	8	15
Dover, Yarmouth, Harwich, Dublin,	10	30
Calice, Rye, Winchelſey, Callwat.	11	15

Example.

The 19 of March this year, it is required to know the time of full Sea at *New-caſtle*: by the Kalendar over against the 19 of March, in the fifth Column, I find the Moon nineteen days old, and by the foregoing Southing-Table, I find the Moon South [illegible] hours 12 minutes in the morning; then in the preceding Table, against *Newcaſtle* I find 5 hours 15 minutes, which added to 3 hours 12 minutes, the aggregate is 8 hours 27 minutes, wherefore I conclude it High-water there at 8 hours 27 minutes in the morning: ſo of any other.

Take notice that the Tide floweth one point of the Compaſs more at the Spring-Tide (which is the New and Full Moons) than at the Neap-Tides (the firſt and ſecond Quarters) as alſo the latitude of the Moon, and Winds, may alter it an hour ſooner or later; let it be their providence who depend upon the Tides, to make timely proviſion.

The Tides like timeous Humors never reſt,
Still conſtant in unconſtancy at beſt.

SAUNDERS,

1671.

Voluit enim Deus Quæ pulchrè essent, ea, in medio constituta patere omnibus, ne. ipsa Rudium ac vulgarium Hominum tractatione eorum deformaretur pulchritudo, Obolescret splendor, dignitas imminueretur, sed Nullus Labor, Arduus videri debet iis, qui res magnas atque præclaras cupiscunt.

Præclarum Scriptum est ab Epicharmo, Deos omnia Mortalibus Laboris pretio vendere.

The moveable Feasts admitting variety every year, and being the principal subject of an Almanack, its necessary to premise two Considerations about *Easter*, on which all the moveable Feasts depend, in it. *Easter* is certainly bounded between the 22 of *March* and 25th of *April*, according to this Verse,

Paschæ Bis undenam Martis non præmit unquam,
Vicenam ac Quintam post nec Aprilis abit.

As it cannot go beyond the 25 of *April*, so it very seldom falls so high, this present year it falls somewhat unusual, (which gave the occasion to make these observations) viz. on the 23d of *April*, very near its utmost bounds, which has not been so many years before, nor will not be so again till the year of our Lord 1753, and these followings, viz. 1766.

But in the years 1698 and 1709, *Easter-day* will fall on the 24 of *April*; and in the year 1736 it will fall on the 25 of *April*, according to the *Julian* Accompt used in England, if the *Kalender* be not reformed. But, in above a hundred years to come it falls but once so, and this is when the *Golden* Number is 8, and the *Dominical Letter* C, in the same years, and not otherwise; It falls on the 24 of *April*, when the *Golden Number* is 8 or 19, and the *Dominical*

Letter B. *Easter* falls on the 23d of *April*, when the *Golden Number* is 8, or 19, and the *Dominical Letter* A, (as this year) not otherwise.

The second observation is, that this present year, *our Easter*, which is the 23d of *April* Old Stile, falls *five weeks* or 35 dayes after the *Romish Easter*, or the Forraign Account; many times their Account and ours brings out *Easter* to fall upon *one* and the *same* day; but they may differ 7 dayes, 28, or 35 dayes, and not otherwise, as this year, and the like difference of 35 dayes betwixt *our* Easter and *theirs* will fall in these years following, *viz.* 1674, 1690, 1693, 1698, 1701, 1704, 1709, 1712, 1717, 1728, 1733, 1736, 1739, 1742, 1755, 1758, 1761, 1766, 1769, twenty times within the compass of one hundred years, and neither more nor less; but, if the *Kalender* be not reformed, and the *World* continue so long, in the year of Christ 2437, there will be 42 dayes difference: And, in the year of Christ 4609, there will be 49 dayes difference betwixt the *Gregorian* Accompt, and the *Julian* which is ours, in the keeping of *Easter*, and so consequently all the moveable Feasts.

Of Eclipses this present Year 1671.

THere are only *two Eclipses* of the Moon, almost Central, which is the reason (as I have demonstrated in my former Almanack) why there is none of the Sun this year.

The *First Eclipse* of the Moon will be on the 15 of *March* near *Eleven* of the clock in the forenoon, by which means it will be visible to our *Antipodes*, to the Inhabitants of *New Guiny*, the *Moluccas*, and *Philippine* Islands, the Streights of *California*, The *Moon* is *Eclipsed* to the quantity of 20 Digits, and will be sometime in total darkness. It were to be wished we had some ingenious Seamen, who at that time are conversant in those parts, would make observation and communicate the same.

The

The *Second Eclipse* of the *Moon* is *total*, and almost Central, which will in *part* be visible to us in *London*, and all *England* over the eighth day of *September* in the afternoon.

The *Beginning* will be at 51 m. after	4	Afternoon
The beginning of *Total* darkness at 51 m. after	5	
The *middle* of the *Eclipse* at 41 m. after	6	
The *end* of *Total* darkness at 31 m. after	7	
The full *end* 30 min. after	8	

So that the *Moon* will Arise *Eclipsed* if the Skye be clear in the East, and the *last* half will be *visible* to us in *England*; from the *beginning* to the *end* of the Eclipse will be 3 houres 39', you may begin to see it at 9 min. after 6 in the *evening*, the Moon then beginning to rise totally darkned 5. The Moon suffers this *Eclipse* in the 2 degree of *Pisces*. The significations hereof are deleated by the Licenser.

Of the Four Quarters of the Year,

And first of the Spring.

WHich *begins* this year (the Sun entring the first Scruple of Aries) the 10th of *March*, 12 minutes after 10 in the forenoon, equalizing day and night. ♃ ♂ ☉ ☿ ♄ and the ☽ are all dignified this Quarter, only ☿ is very weak, ♃ is much the strongest, which causeth of *salubrious, wholesome, Northern* winds, temperates the season, producing good *seed-times*, healthful and comfortable *Air* to Man and Beast, the Winds temperate, and a moderate temperament in all things.

Of Summer.

THis *Quarter* begins, the *Sun* entring the first Scruple of *Cancer*, which this year is *June* the 11th, one hour, 38 min. Afternoon. Here ☿, ♀ and the ☽ have chief dominion, especially ♀, which is chiefest dignified of all to the years end; and, being posited in the Cusp of the 10. *Evehit Doctos & Mercatores ad honores*, ♀ and the ☽ increase humility, so that this Quarter is like to be windy and wet, more then is convenient, which may increase Diseases, and indanger Sheep with a *Rot*.

Of Autumn.

WHich *begins* this Year the *Sun* entring *Libra*, *September* 13, 48 min. after 4 in the morning. In this Quarter ♃ is very weak, so are all the significations of ♃, and somewhat contemptible, wilye ♀ prodigiously predominating, the ☽ ♀ ☉ and ♃ in some measure dignified, denoting this Quarter much foggy dull slabby weather, with great and boistrous winds, and being posited in the second, *notat lucra mercatoribus, & digna Laborantibus: præmia.*

Of Winter.

WHich Commenceth (the *Sun* entring the first scruple of *Capricorne*) the 11th day of *December*: 4 houres, 37 min. afternoon, ♀ ♄ and ♂ being most strong, which intimate, ofr *blustring* winds this quarter, *Frost, Snow*, and various weather, but very *churlish*, sharp and severe, *Immutationes & diversitates in aere, terræmotus, Nives ac pruinæ, & frigora immensa*, &c. Earthquakes, Snow, Frost, and extremity of bad weather.

A

A Celestial Cronology for many hundred Years past, wherein may be seen under what Position of Heaven those Grand Accidents have hapned in *England*; And may tend to Informe our Prognostiques for the time to come.

And First of Earthquakes, and those prodigious Accidents thereon depending.

IN the *year* of our Lord 1233, 438 years since, in the beginning of *November*, was great Thunder and Lightning, and followed with a terrible *Earthquake*, a terror to the Inhabitants of *Huntington*, St. *Ives*, and all those Countryes, wherein was much mischief done, and a great *Dearth* followed, ♄ and ♃ then in ♂ in ♒, Mars in Leo in opposition to them both.

In the year of Christ 1077, 594 years since, on the 27 of *March*, was a general *Earthquake* throughout England, did much harme, and in the Winter following a *Frost* that continued from the first of *November* to the midst of *April*, also a *Blazing-star* appeared on *Palme-Sunday*, being the 16 of April, ♄ in 2 gr. of ♎, ♃ in ♎ Retrog. Mars in the beginning of Aries in ☌ to them both.

1133, 538 years since, the second of *August* was so great an *Eclipse* of the *Sun*, that *William* of *Malmsbury*, that then lived, writes, That he saw the *Stars* about the *Sun*; on the *Fryday* following, being the fourth day after, such an *Earthquake* hapned in this Realm, that many *Houses* and Buildings were overthrown; This *Earthquake* was so sensible, or rather so visible, that the *Wall* of the House wherein the *King* then sate, was lift up with a double remove, and at the *third* it setled it self again in its due place: Moreover, at the very same time also, in several parts of *England*, fire burst out of certain Riffs of the Earth, in such huge flames,

that neither by *water*, nor otherwise it could be quenched, this was in the 33 year of King *Henry the First*, Saturn then in the latter end of ♑, and beginning of ☌ ☉ ♃ in the beginning of Cancer, and Mars in *Medio Leonis*.

1085, 586 years since, was a great *Earthquake* in September, ♄ in ♍, ♃ in ♋, ☉ in ♍, in ☌ ♄ and ☍ ♃.

1247, 424 years since, in *February*, on Valentines Eve, a great *Earthquake* hapned here in *England*, and chiefly about *London*, on the *Thames* side, by which many buildings were overthrown, (though built lovv, and of wood) It hath alwayes been observed concerning *Earthquakes*, the *seldomer* they chance in England, the *more dreadful* they are when they *come*, A little before this *Earthquake*, the *Sea* had ceased from *ebbing* and *flowing* for the space of *three* Months together by a long Tract near to the English *shore*, to the great wonder of all, for either it flowed not at all, or else so little, that it might not be perceived; and, after the *Earthquake*, there followed such a season of *foule* weather, that the *Spring* seemed to be changed into *Winter*, for scarce was there any day without *Rain* till St. *Bennet*, ♄ then in ♌, ♃ in 10, ☽ in the beginning of ♍.

1274, 397 years since, on St. *Nicholas* even, there chanced a terrible *Earthquake*, with *Lightning* and *Thunder* and therewithal a Burning *Drake*, brought a world of fear upon the People, ♄ in the middle of Cancer, ♃ in 26 of ♐ ☽ in ♏ & to ♃.

1116, 555 years since, the first of *November*, great *Lightning* and *Thunder*, and such a storme of *Hail* fell, that the People were wonderfully amazed therewith, and on the 13th of *December* following, there hapned a terrible *Earthquake*, and the *Moon* looked like *Blood*, and this about midnight, at which very time, Queen *Maud*, wife to King *Henry the First* died, ♄ in ♊ R. ♃ in ♍, ☽ in ♎ and ♏.

1275, 396 years since, the 11th day of *September* a general *Earthquake* chanced, between the first and third hour of the day, the *Church* of St. *Michael* on the hill without *Glastenbury*, was therewith thrown down to the ground, af-

ter

ter this it rained *Blood* in *Wales* and other places, to the great amazement of the people, ♄ then in the 10 of ♌, ☿ in 6 ♍, ♂ in 12 ♈ □ ☉ ♂, and a □ ☿ and ♂ preceding.

1563, 108 years since, on the eighth of *July*, a terrible *Earthquake* in *Lincolne* and *Northamptonshires*, the Planets thus posited, the ☉ 25 ♋, ☽ 1 ♑, ♄ 25 ♋ in ☌ ☉, ☿ 19 ♋, ♂ 22 ♈, ♀ 17 ♊, ♀ 16, ♂ ♄ ☉, □ ♄ ♂.

1575, 96 years since, the 20 of *February*, between 4 and 6 in the afternoon, a great and prodigious *Earthquake* happened, which made the *Bells* toll in Steeples, Goods move about the houses, frighted People out of Towns and Churches, overthrew Brick Chimneys, and did much mischief, especially in *York*, *Worcester*, *Gloster*, *Bristow*, *Hereford*, *Tewksbury*, and all the Countreys thereabouts, ☉ then in 17 ♑ ☽ 10 ♒ ♄ 1 ♈, ☿ 3 ♌, ♂ 19 ♐, ♀ 1 ♒, ☿ 14 ♑, □ ♂ ☉, □ ♂ ☿.

1580, 91 years since, on the 6 of *April*, being Wednesday in *Easter-week*, about 6 in the evening, a sudden *Earthquake* hapned in *London*, and almost generally throughout all *England*, which frighted the People beyond expression, the great *Clock-bell* at *Westminster* stroke of it self against the Hammer with the shaking of the Earth, and divers other *Clocks* and *Bells* in the *Steeples* of *London* and elsewhere did the like; the *Gentlemen* of the *Temple* then at supper, ran from their Tables, and out of the Hall in a fright, with their knives in their hands; A *piece* of the *Temple*-Church fell down, some *Stones* fell from S. *Pauls* in *London*; at *Christ-Church*, near Newgate-Market, in Sermon time, fell a *Stone* from the Church kill'd one, hurt another that dyed within four dayes after, divers others at that time were hurt, many Chimneys fell down, and abundance of mischief else done, and this lasted in *London* but *one minute*, (Oh sad! What prevention could any Soul make in so short a time) but, in divers other places it was felt at 6 of the clock, at 9, and at 11. A piece of *Dover Cliff* fell into the Sea, the *Ships* upon the *Coast* and that lay at Anchor, *totter'd* and *shook* the *Sea*; parts

of *Churches*, and many (especially Brick) buildings were overthrown suddenly, and many, in that instant, lamentably and miserably murthered thereby: the ☉ was then in ♐ ☿, ☽ 20 ♑, ♄ 16 ♒, ♃ 13 ♐ R. ♂ 29 54′ ♒, ♀ 25 ♑, ☿ 22 ♐.

Let us make this use hereof to *magnifie* and *Praise* the *Almighty*, who hath preserved *us*, and our *Nation* many years from those *Terrors*: It is to be *feared* that the years 1677, and 1681 may produce the like, if not before. Against which let us lift up our *hands* with our *hearts* to *Heaven*.

If we consider the Terrors and Frights our Fore-fathers had by these Earthquakes, the dread and horror in remembring them, we cannot blame them in those dayes for building so *low* and *mean* with *Timber*; for, the Ages that had seen and remembred these *Horrors*, shewed their prudence in so *building*; but, in *our* dayes, the sad *effects* of *Earthquakes* are out of memory, and the terrors of *Fire* have made such deep Impressions in our mindes, that we onely minde the prevention of that. Thus much in particular of *Earthquakes* in *England*, and the *Celestial* causes thereof, but he that would more largely contemplate the *generality*, the sublunary *causes*, their *sad effects*, and *significations*, let him consult Mr. *Lillies English Merlin* for 1670. where he shall find by his most worthy able Pen, more full satisfaction than in any, or all, that ever handled that subject.

I cannot farther inlarge; next year (God willing) I shall present my *Reader* with some other remarkable matters, worthy his Consideration.

Chyromancy, Phisiognomy, *and the* Modes of the Body, *formerly made publick by this Author, is now Re-printed, with many Additions, in Folio, and sold by* Nath. Brooks *at the Angel in Cornhill.*

GESTA

1665
